Working Output

How this output was produced

Every panel in this document is real console output, captured on 4 October 2026 by running the program in this repository against MySQL. Nothing was typed in by hand.

Python	3.14.5
MySQL Server	26.7.0 (with the <code>mysql</code> command-line client for sections 2 and 3)
Libraries	mysql-connector-python 26.7.0, tabulate 0.10.0
Operating system	Windows 11

Section 1 is one continuous session that starts from the sample data in `music_db.sql`, so each step builds on the one before (for example, the songs added in 1.2 appear in 1.3). Section 2 was run on the original sample data. Text typed by the user is **highlighted**.

The output was captured from a copy of the database so that real data was not changed; that copy's name is shown as `music_db`.

4. Connection problems

4.1 Wrong MySQL password

The program explains what to fix instead of crashing.

✗ MySQL rejected the username/password. Update DB_CONFIG in db_config.py.

4.2 MySQL server not running

✗ Cannot connect to MySQL on 'localhost'. Make sure MySQL Server is installed and running.

5. Automated test results (77/77 passed)

An automated script ran every menu option with valid input, invalid input, boundary values (for example 100 vs 101 characters), SQL injection attempts, emoji and accented text, and connection failures, against MySQL 26.7.0.
